Updated: September 24, 2009

Clinical Trial: Coronary Ischemia

Patient Name: Braxton Webb
Montgomery, AL

Description of Condition Prior to Adult Stem Cell Therapy:

Mr. Webb's heart condition was so painful it kept him from doing even the simplest everyday task. A friend of his daughter's happened to see a television news story on Dr. Lasala's research in Coronary Ischemia using adult stem cells. His daughter called TCA Cellular the next day and he was the last patient accepted in the Phase I trial.

After Treatment:

Mr. Webb reported feeling more energy and no angina pain.

Follow Up Visit:

Mr. Webb reported his quality of life is so good he is back to doing activities he could not do before and without pain, including playing golf. His angina pain is gone and he has a lot of energy.

Testimonial:

"My pain is gone. It eliminated my angina pain."

"I have so much more energy. My quality of life has improved so much." "I have a better lifestyle and can do most anything. I am even back to playing golf."

"I was so impressed with Dr. Lasala I switched from my cardiac doctor in Montgomery, AL and drive to Dr. Lasala's office in Covington for my regular visits."

Braxton's wife adds, "He couldn't walk to the mailbox without chest pain, now he rides his recumbent bike for 45 minutes a day. He is also able to do light yard work such as weeding the garden that he was unable to do before. Before the infusion he spoke very slowly and since cell infusion normal speed of speech has resumed."
